DPDISPATCHER API

```
class dpdispatcher.JobStatus.JobStatus(value)
```

An enumeration.

```
completing = 6
```

```
finished = 5
```

```
running = 3
```

```
terminated = 4
```

```
unknown = 100
```

```
unsubmitted = 1
```

```
waiting = 2
```

LSF batch

A machine is used to handle the connection with remote machines.

1.1 Parameters

context [SubClass derived from BaseContext] The context is used to maintain the connection with remote machine.

```
dpdispatcher.SSHContext.sftp
```

```
dpdispatcher.SSHContext.ssh
```

A machine is used to handle the connection with remote machines.

1.2 Parameters

context [SubClass derived from BaseContext] The context is used to maintain the connection with remote machine.

A machine is used to handle the connection with remote machines.

1.3 Parameters

context [SubClass derived from BaseContext] The context is used to maintain the connection with remote machine.
